Multi-Task and Transfer Learning in Low-Resource Speech Recognition

Josh Meyer

PhD Candidate Department of Linguistics University of Arizona

Thank You!

Keeping me on track: Tom, Mihai, Mike, Clay

Keeping me funded: Dorian, Georgia, Shelley

Keeping me happy: MCV, Megan, Nick, Nick, Rilo, Elise, Shiloh, Rolando, Bill, Samwise, Gus, Ryan, Jaime, Dane, Emily, Joan, Yuan-Lu, David, Genet, Joe, Kevin,

Roadmap

- Overview of ASR.
- Overview of Transfer Learning
 - Multi-Task Learning
 - Copy-Paste Transfer
- Multi-Task Learning Studies
 - Linguistic Tasks
 - Engineered Tasks
- Copy-Paste Transfer Studies
 - Multilingual Transfer
 - Model Interpretability
- Conclusion

Introduction

Motivation

Current training methods for automatic speech recognition require massive collections of data.

However, most use-cases have little — if any — available data.

Motivation

Current training methods for automatic speech recognition require massive collections of data.

However, most use-cases have little — if any — available data.

Motivation

Current training methods for automatic speech recognition require massive collections of data.

However, most use-cases have little — if any — available data.

But we can exploit similar use-cases!

Multi-Task Studies

Can Linguistics help in a MTL Framework?

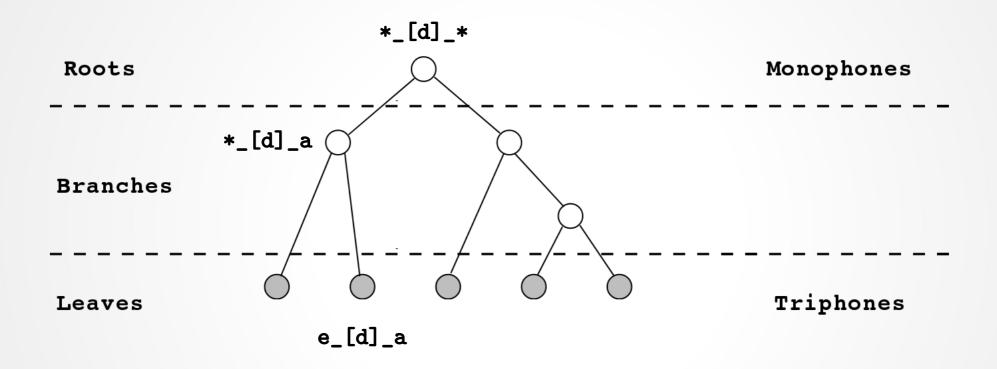

Can Linguistics help in a MTL Framework?

• Yes: Bells and Renals (2015), Huang et al. (2015), Chen & Mak (2015), Seltzer & Droppo (2013)

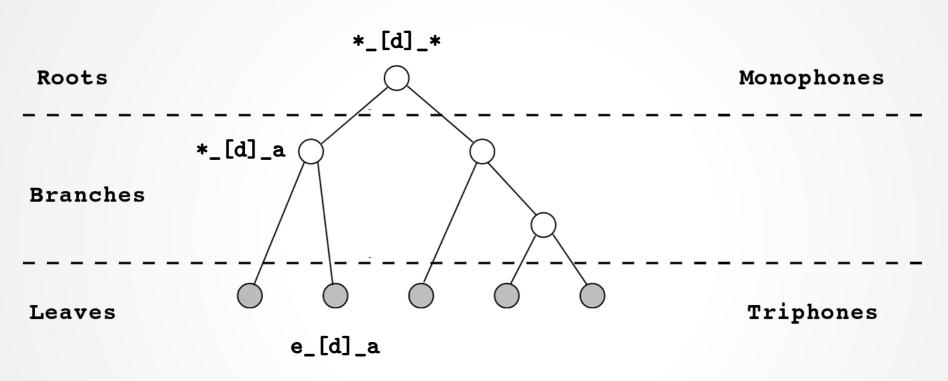

Can Linguistics help in a MTL Framework?

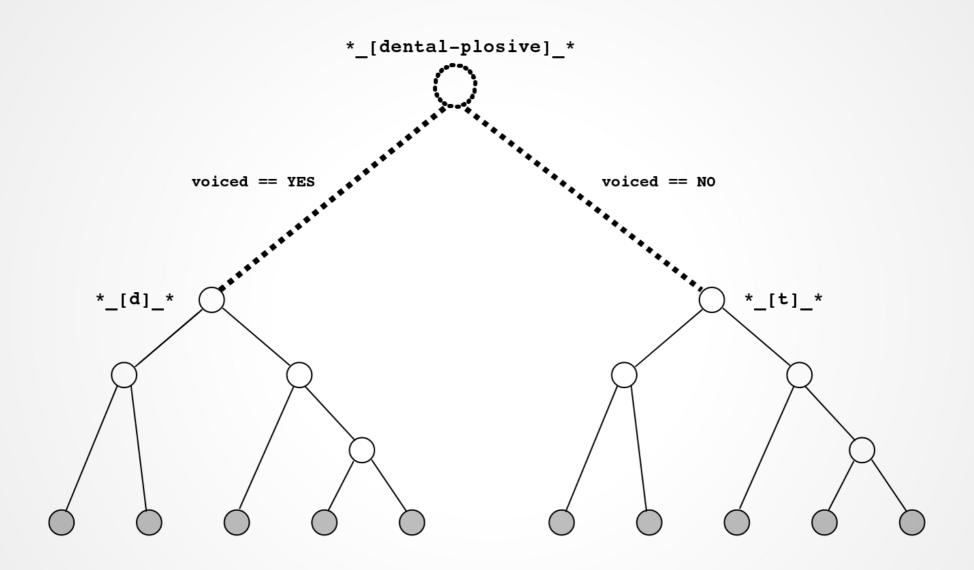

- **Yes**: Bells and Renals (2015), Huang et al. (2015), Chen & Mak (2015), Seltzer & Droppo (2013) ...
- No: Pironkov et al (2016)

"Using even broader phonetic classes (such as plosive, fricative, nasal...) is not efficient for MTL speech recognition."

Summary: Linguistic Tasks

- Linguistics can help for transfer!
 - But we must keep in mind weighting
- More Tasks isn't always better
 - Monolingual: 1 extra task is best
 - Multilingual: 2 extra tasks is best

Engineered Tasks

Engineered Tasks

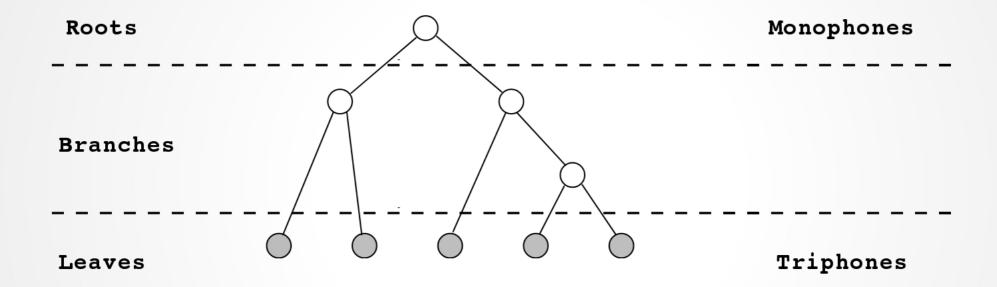

Can we find useful linguistic bias without a linguist?

Engineered Tasks

Can we find useful linguistic bias without a linguist?

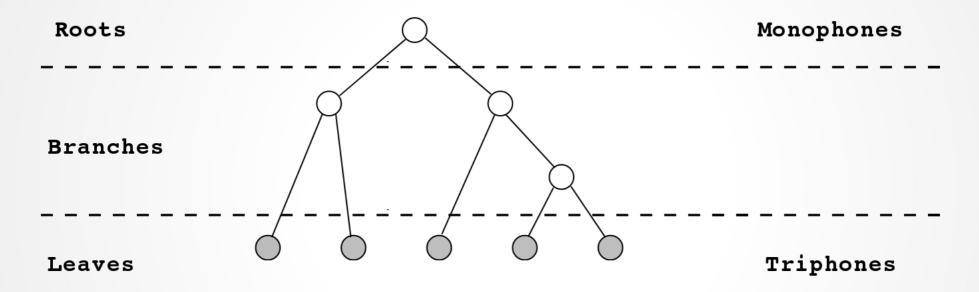

Focus on multilingual scenario

Linguist-Crafted Tasks

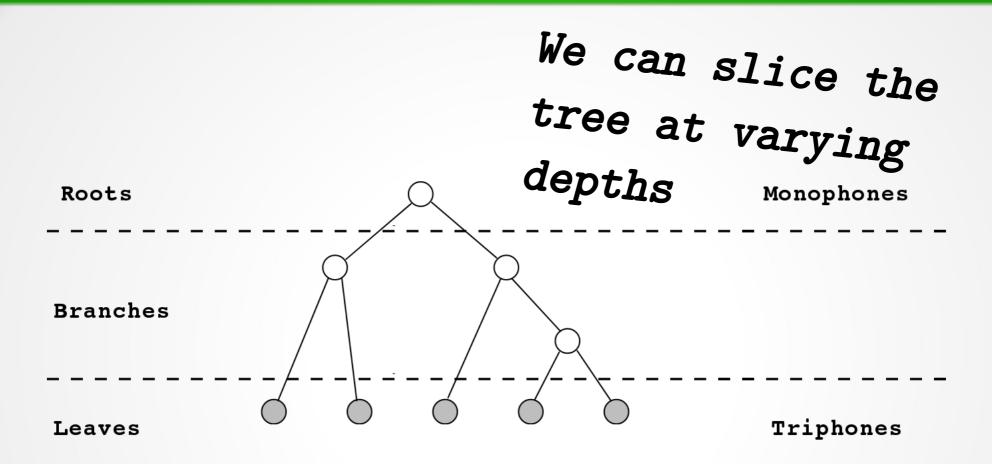

Linguist-Crafted Tasks

Lots of unused structure...

Linguist-Crafted Tasks

Alignment Procedure

- GMM-HMM Alignment
- Monophones
 - 25 iterations of Baum-Welch
 - 1,000 Gaussian components
- "Half-phones"
 - 25 iterations of Baum-Welch
 - 792 leaves
 - 5,000 Gaussian components
- Triphones
 - 25 iterations of Baum-Welch
 - 1584 leaves
 - 5,000 Gaussian components

Alignment Procedure

- GMM-HMM Alignment
- Monophones
 - 25 iterations of Baum-Welch
 - 1,000 Gaussian components
- "Half-phones" (Half-way down the tree)
 - 25 iterations of Baum-Welch
 - 792 leaves
 - 5,000 Gaussian components
- Triphones
 - 25 iterations of Baum-Welch
 - 1584 leaves
 - 5,000 Gaussian components

DNN Training Procedure

- 5 Layer, Time-Delay Neural Network
- 500 Nodes / Layer
- ReLU Activations
- Stochastic Gradient Descent for 10 epochs

DNN Training Procedure

Smarter weighting

DNN Training Procedure

Smarter weighting

Source:Target Ratio	Target Weighting		
2:1	1.53x		
1:1	3.06x		
1:2	6.12x		

Multilingual Engineered Tasks

CORPUS
Train
Test

Speaker LibriSpeech-A LibriSpeech-B
Language LibriSpeech-A Kyrgyz Audiobook

Multilingual Engineered Tasks

Auxiliary (Source Lang) Tasks		e:Target 1-to-1	Weighting 2-to-1
STL Baseline	50.54		
Monophones	48.20	47.32	47.41
Halfphones	48.68	46.73	48.68
Triphones	49.37	47.12	46.73
${\bf Monophones + Halfphones}$	48.20	48.49	48.10
Halfphones + Triphones	50.05	48.00	47.90
Monophones + Halfphones + Halfphones	48.88	48.20	48.59

Summary: Engineered Tasks

- Smarter Weighting helps
 - Based on size of datasets
- We can find tasks in the tree
- Again, more tasks isn't always better

Table 5. English vs. German Audio Classification Accuracy (%)

Summary: End-to-end Transfer

Interpretability Studies

- Before the recursive Layer, the model has Language-specific and language-agnostic representations

Conclusions

Summary: A Dissertation

Multi-Task Studies

- Abstract linguistic representations **are** helpful
- Engineered Tasks can discover useful bias in the phonetic decision tree
- Relative Task weighting is crucial to success

Copy-Paste Transfer Studies

- Transfer with fine-tuning always helps
- The source model has learned Language-general representations before recurrent knowledge is possible

APPENDIX A: Multi-Task

Linguistic Knowledge

Example: Collapsing on Voice

```
B P --> P
                bilabial plosives
CH JH --> CH
                alveo-palatal affricates
D T --> T
                alveolar plosives
DH TH --> TH
                interdental fricatives
F V --> F
                labio-dental fricatives
G K --> G
                velar plosives
S Z --> S
                alveolar fricatives
SH ZH --> SH
                alveo-palatal fricatives
```
